EDUCATION

Algonquin College — Web Development and Internet Applications

SEP 2024 - DEC 2025

- Focused on **end-to-end development**, **database design**, **network security**, and **modern architectural standards**
- Graduated from program with high distinction by attaining the Dean's Honours List for each semester

PROFESSIONAL EXPERIENCE

Volinux Studio — Founder & Lead Developer

NOV 2025 - PRESENT

- Architected a high-performance Next.js template system that reduces initial project setup time by 40%, integrating **AI tools and automation** to deliver rapid, production-ready websites for local SMEs
- Established a **security-first operational workflow** to manage client repositories, implementing **automated CI/CD pipelines** and proactive dependency auditing to ensure long-term stability and immediate vulnerability patching

Canada Revenue Agency — Administrator

FEB 2023 - AUG 2024

- Actively participated in meaningful discussions with senior management to share ideas, troubleshoot issues and develop operational enhancements using **clear communication**
- Resolved functional concerns with legacy software by investigating documentation and implementing solutions via **team collaboration**
- Used strong problem-solving skills and attention to detail to resolve issues surrounding **data workflow improvements**

PROGRAMMING LANGUAGES

Python

SQL

HTML & CSS

JavaScript / TypeScript

FRAMEWORKS & LIBRARIES

Django

React & React Native

Next.js & Node.js

Tailwind CSS

DEVELOPMENT TOOLS & WORKFLOW

Git / GitHub

CI/CD Pipelines

AI integration & automation

Cloudflare

Agile development / Jira

REST APIs (JSON & XML)

n8n Workflows

Vercel

Vite

NPM & PIP

OTHER ASSETS

Previously CCNA certified

Reliability Status

NOTABLE PROJECTS

NetBox AI ChatOps Agent — *AI-driven automation interface for real-time IPAM inspection, provisioning and maintenance*

[GitHub Repo](#)

- Engineered an **AI-driven** NetBox middleware agent deployed on Cloudflare Pages and Workers, enabling seamless natural language orchestration for IPv4 provisioning and subnet allocation
- Implemented advanced function-calling logic to programmatically manage the IP lifecycle, allowing **LLMs** to autonomously reserve space and modify infrastructure objects via REST API integrations

AI Restaurant Order Agent — *AI agent automates order tracking and updates spreadsheets*

- Architected **automated n8n workflows** to consume and process **AI-driven REST API webhooks**, streamlining data ingestion and transformation pipelines via **ETL fundamentals**
- Engineered a secure cloud-to-local bridge using ngrok and OpenSSL to tunnel encrypted AI requests, ensuring **data integrity** via cURL validation and HTTPS payload verification

Speech Recognition Maze — *A custom, gamified LLM pipeline processes spoken commands to drive real-time on-screen actions*

[GitHub Repo](#) | [Live Demo](#)

- Architected a voice-controlled maze engine using React and Vite, implementing dynamic procedural generation and state-driven movement logic via JavaScript
- Integrated a custom TensorFlow.js model and to facilitate real-time speech classification, translating spoken commands into in-game actions with Tailwind CSS for responsive UI

Beer Order App — *Interactive e-commerce React SPA that simulates browsing and adding items to a cart*

[GitHub Repo](#) | [Live Demo](#)

- Architected a performant e-commerce SPA using React and Tailwind CSS, leveraging the React Context API and Custom Hooks to manage complex global state and cart logic
- Engineered a modular routing system with React Router and JavaScript, facilitating seamless navigation and real-time data flow from a JSON-based product catalog

FODMAP App — *Full-stack application provides secure account registration and user interaction*

[GitHub Repo](#) — ongoing development; repository updated continuously

- Developed a **full-stack** recipe-sharing application featuring a React/Vite frontend and a robust **Python Django** backend, managing complex relational data with **PostgreSQL**
- Engineered secure REST APIs using Django REST Framework and JWT Authentication, ensuring protected account registration and encrypted user-to-server communication
